DRAFT FOR PUBLIC REVIEW

## **Foreword**

Uganda National Bureau of Standards (UNBS) is a parastatal under the Ministry of Trade, Industry and Cooperatives established under Cap 327, of the Laws of Uganda, as amended. UNBS is mandated to co-ordinate the elaboration of standards and is

- (a) a member of International Organisation for Standardisation (ISO) and
- (b) a contact point for the WHO/FAO Codex Alimentarius Commission on Food Standards, and
- (c) the National Enquiry Point on TBT Agreement of the World Trade Organisation (WTO).

The work of preparing Uganda Standards is carried out through Technical Committees. A Technical Committee is established to deliberate on standards in a given field or area and consists of key stakeholders including government, academia, consumer groups, private sector and other interested parties.

Draft Uganda Standards adopted by the Technical Committee are widely circulated to stakeholders and the general public for comments. The committee reviews the comments before recommending the draft standards for approval and declaration as Uganda Standards by the National Standards Council.

The committee responsible for this document is Technical Committee UNBS/TC 10, *Management and services*, Subcommittee SC 4, *Pest control services*.

# Classification of pesticides and stock remedies — Part 2: Stock remedies for sale and handling

## 1 Scope

This Final Draft Uganda Standard covers the classification of stock remedies, with the exception of vaccines and antibiotics, for sale and handling in Uganda. Each stock remedy has been allocated to one of five danger groups in accordance with the degree of its intrinsic toxic properties. The allocation is based on the WHO guidelines.

## 2 Normative references

The following referenced documents referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

## 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

— ISO Online browsing platform: available at <http://www.iso.org/obp>

### 3.1

#### **danger group**

group symbol that indicates the degree of danger or hazard presented by the primary property of a specific substance in accordance with internationally recognized classifications

### 3.2

#### **pest**

any form of plant or animal life or any pathogenic agent, other than a beneficial organism, capable of directly or indirectly injuring any plant material or beneficial organism, and includes weeds

### 3.3

#### **pesticide**

chemical which, by virtue of its poisonous properties is used to kill pests in agriculture and forestry

### 3.4

#### **stock remedy**

substance intended, or offered, to be used in connection with domestic animals, livestock, poultry, fish or wild animals (including wild birds), for the diagnosis, prevention, treatment or cure of any disease, infection or other unhealthy condition, or for the maintenance or improvement of health, growth, production or working capacity, but excluding any substance in so far as it is controlled under the Medicines and Related Substances Control Act, 1965, (Act No. 101 of 1965)

**NOTE** Vaccines and antibiotics used as stock remedies are controlled under the Medicines and Related Substances Control Act, 1965 (Act No. 101 of 1965).

## **4 Listing of stock remedies**

**4.1** The Crop Life International abbreviation (code, term and definition) for each stock remedy available for sale and handling in Uganda is given in A.1.

**4.2** An alphabetical list of stock remedies for sale and handling is given in A.2 comprising the following:

- a) Crop Life International abbreviation (formulation type);
- b) common name(s) of the active ingredient(s) of the formulation;
- c) concentration(s) of the active ingredient(s);
- d) description of the product;
- e) danger group; and
- f) colour code.

**NOTE** Where possible, ISO approved names have been used.

## **5 Toxicity**

**5.1** The  $LD_{50}$  for acute oral toxicity, in milligrams per kilogram of body mass, is that dose of the stock remedy that, when administered orally, is most likely to cause the death, within 14 days, of 50 % of both male and female young adult albino rats. The number of animals tested shall be sufficient to give a statistically significant result and the test shall comply with good laboratory practice.

**5.2** The  $LD_{50}$  for acute dermal toxicity, in milligrams per kilogram of body mass, is that dose of the stock remedy that, when administered by continuous contact, for 24 h, with the bare skin of both male and female albino rabbits, is most likely, to cause the death, within 14 days, of 50 % of the animals tested. The number of animals tested shall be sufficient to give a statistically significant result and the test shall comply with good laboratory practice.

**5.3** When the acute toxicity in animals of a commercial stock remedy has been determined, the stock remedy shall be classified in one of five danger groups in accordance with Table 1.

## **6 Danger grouping of stock remedies**

**6.1.1** The classification distinguishes between the more and the less hazardous forms of each pesticide in that it is based on the toxicity of the technical compound and on its formulations. [In particular, allowance is made for the lesser hazards from solids as compared with liquids.]

The classification is based primarily on the acute oral and dermal toxicity to the rat since these determinations are standard procedures in toxicology. Where the dermal  $LD_{50}$  value of a compound is such that it would place it in a more restrictive class than the oral  $LD_{50}$  value would indicate, the compound will always be classified in the more restrictive class. Provision is made for the classification of a particular compound to be adjusted if, for any reason, the acute hazard to man differs from that indicated by  $LD_{50}$  assessments alone.

**6.1.2** Table 1 shows WHO uses the Acute Toxicity Hazard Categories from the Globally Harmonised System of Classification and Labelling of Chemicals (GHS) as the starting point for classification. This change is consistent with the 1975 World Health Assembly Resolution which envisaged that the WHO Classification would be further developed with time in consultation with countries, international agencies and regional bodies. The GHS meets this requirement as a classification system with global acceptance following extensive international consultation

**Table 1 —Recommended criteria for classification**

WHO Class		<i>LD<sub>50</sub> for the rat</i> mg/kg body weight	
		Oral	Dermal
Ia	Extremely hazardous	< 5	< 50
Ib	Highly hazardous	5 – 50	50 – 200
II	Moderately hazardous	50 – 2 000	200 – 2 000
III	Slightly hazardous	Over 2 000	Over 2 000
U	Unlikely to present acute hazard	5 000 or higher	

**6.2** The danger grouping criteria given in Table 1 are applicable to the labelling and marking of stock remedies for purposes of sale and handling in Uganda.

**6.3** The allocation of a stock remedy to a danger group is based on the toxicity of the active ingredient(s) of the formulation; flammability is not taken into account.

**6.4** In allocating stock remedies to danger groups, cognizance shall be taken of instances of accidental poisoning in humans, any special properties of individual stock remedies (for example, liquid state or high volatility), any special likelihood of penetration and special biological effects.

**6.5** In cases where no history of poisoning in humans is available, the allocation of a stock remedy to a danger group is based on data obtained from animal experiments.

**6.6** In cases where two or more routes of administering a stock remedy exhibited different orders of toxicity, the allocation of that stock remedy to a danger group is based on the higher degree of danger.

**6.7** In cases where the *LD<sub>50</sub>* of the active ingredient in a solid, dry stock remedy is known, the *LD<sub>50</sub>* of the stock remedy can be calculated by using the following formula:

$$LD_{50f} = \frac{LD_{50a} \times 100}{P_a}$$

where

*LD<sub>50f</sub>* is the *LD<sub>50</sub>* value for the stock remedy, in milligrams per kilogram;

*LD<sub>50a</sub>* is the *LD<sub>50</sub>* value for the active ingredient, in milligrams per kilogram;

*P<sub>a</sub>* is the percentage (by mass) of the active ingredient in the stock remedy.

**6.8** In cases where the stock remedy contains several active ingredients, the danger group allocation is based on the *LD<sub>50</sub>* of the stock remedy as a whole, in accordance with the criteria given in 6.4 to 6.6 (inclusive).

**6.9** In cases where it is not practical to determine the *LD<sub>50</sub>* of a solid, dry stock remedy that contains several active ingredients as described in 6.4 to 6.6, the following formula can be used:

$$\frac{C_a}{T_a} + \frac{C_b}{T_b} + \frac{C_z}{T_z} = \frac{100}{T_m}$$

where

$C$  is the concentration of active ingredients a, b...z in the stock remedy, as a percentage (by mass);

$T$  is the oral  $LD_{50}$  of active ingredients a, b...z, in milligrams per kilogram;

$T_m$  is the oral  $LD_{50}$  of the stock remedy as a whole, in milligrams per kilogram.

**NOTE** The formula can also be used to determine dermal toxicity, provided that information is available on the same route of toxicity for all the active ingredients of a stock remedy. The use of this formula does not take into account any potentiation or protective phenomena

**6.10** In cases where it is not practical to determine the experimental toxicity of a liquid stock remedy by using the methods given in 6.4 and 6.5, the formulation shall be classified in accordance with the  $LD_{50}$  of the active ingredient. If more than one active ingredient is present in a liquid stock remedy, the formulation shall be classified in accordance with the  $LD_{50}$  of the most toxic active ingredient.

## 7 Special provisions for stock remedies

### 7.1 Special provisions for stock remedies with certain active ingredients

Stock remedies that contain the following active ingredients are allocated to the danger groups indicated:

- a) phosphoric acid: danger group III;
- b) sulfonic acid: danger group III;
- c) coal tar solutions: danger group II;
- d) formaldehyde: danger group II;
- e) glutaraldehyde: danger group II;
- f) monensin: danger group II; and
- g) narasin: danger group III.

### 7.2 Special provisions for anthelmintics

Anthelmintics are allocated to the following danger groups:

- a) liquid anthelmintics: danger group III; and
- b) solid anthelmintics: danger group IV.

### 7.3 Special provisions for aerosol dispensers that contain stock remedies

Aerosol dispensers that contain stock remedies are allocated to the following danger groups:

- a) aerosol dispensers that contain pesticides: danger groups II or III; and
- b) aerosol dispensers that do not contain pesticides: danger group IV.

## **8 Competent authorities for the marking, labeling and disposal of stock remedies**

- 8.1** The marking, labelling and disposal of stock remedies are not covered by this standard.
- 8.2** Information on the marking and labelling of packaging for stock remedies intended for sale and handling on the Uganda market can be obtained from the Registrar: Act 36/1947.
- 8.3** Stock remedies shall be disposed of in accordance with the minimum requirements for the handling, classification and disposal of hazardous waste,

DRAFT FOR PUBLIC REVIEW

## **Annex A**

(normative)

### **Crop life international abbreviations and alphabetical list of stock remedies**

#### **A.1 Crop life international abbreviations**

Code Term Definition

**AE**  
**Aerosol dispenser**  
A container from which the active ingredient(s) is/are dispersed generally by a propellant as fine droplets/particles upon the actuation of a valve

**AL** Liquids to be applied undiluted Self-defining

**BR**  
**Briquette**  
A solid block designed for controlled releases of active ingredient

**CG**  
**Encapsulated granule**  
A granule with a protective or release-controlling coating DP Dustable powder

A free-flowing powder, suitable for dusting

**EC**  
**Emulsifiable concentrate**  
A liquid, homogeneous stock remedy to be applied as an emulsion after dilution in water

**FU**  
**Smoke generator**  
A combustible stock remedy, generally solid that, upon ignition, releases the active ingredient(s) in the form of smoke

**GS**  
**Grease**  
A very viscous stock remedy based on oil or fat

**OL**  
**Oil miscible liquid**  
A liquid homogeneous stock remedy

**PC**  
**Paste concentrate or gel**  
A solid stock remedy to be applied as a paste after dilution with water, or as a gel

**PO**  
**Pour-on**  
A solution for pouring onto the skin of animals, in high volume (normally more than 100 ml per animal)

**SA**

**Spot-on**

A solution for spot application to the skin of animals, in low volume (normally less than 100 mL per animal)

**SC** Suspension concentrate (= flowable concentrate) A stable suspension of active ingredients in a fluid intended for dilution with water before use

**SP**

**Water-soluble powder**

A powder stock remedy to be applied as a true solution of the active ingredient after solution in water but that could contain insoluble, inert ingredients

**TB**

**Tablet**

A solid stock remedy in the form of small, flat plates

**WP**

**Wettable powder**

A powder stock remedy to be applied as a suspension after dispersion in water

**XX**

**Others**

All stock remedies not yet designated by a specific abbreviation

## Certification marking

Products that conform to Uganda standards may be marked with Uganda National Bureau of Standards (UNBS) Certification Mark shown in the figure below.

The use of the UNBS Certification Mark is governed by the Standards Act, and the Regulations made thereunder. This mark can be used only by those licensed under the certification mark scheme operated by the Uganda National Bureau of Standards and in conjunction with the relevant Uganda Standard. The presence of this mark on a product or in relation to a product is an assurance that the goods comply with the requirements of that standard under a system of supervision, control and testing in accordance with the certification mark scheme of the Uganda National Bureau of Standards. UNBS marked products are continually checked by UNBS for conformity to that standard.

Further particulars of the terms and conditions of licensing may be obtained from the Director, Uganda National Bureau of Standards.
